

Key Findings – Cancer Risk Factors

Population Profile

 Mean age of 63.2 years

 Gender split: 49 % male / 51 % female

Senior population, typical of an at-risk group

Risk Factors

 Smoking: 5.2 (1-10)

 Alcohol: 5,0 (high)

 Obesity: 6,0 (High)

 BRCA mutation
Risk prevalence $\times 0$

 Family history of cancer 19 %

Risk Distribution

Mean risk score: 0,45

Actionable Insight

Moderate-to-high risk profile driven by lifestyle behaviors and environmental factors: **focus on prevention and targeted screening**
